Road Zeppelin® Seat Pads are equipped with a unique air bladder system that allows your weight to be distributed evenly across the entire seating surface, ensuring hours of comfort for both rider and passenger. The air bladder system is designed to remove pressure points and provide shock absorption to reduce vibration. The mesh cover allows air to circulate beneath the rider's body, reducing the air temperature between the rider and seat. The easy-to-reach integrated hand pump and air release valve permits quick and convenient adjustment. Shaped to conform to most Harley-Davidson® seats, the pads feature an adjustable mounting strap and a non-skid surface to keep them in place.

Designed to keep the rider cool by reducing the perspiration build-up between you and the seating surface, the Circulator Pads can be installed and removed in seconds for easy cleaning. The low-profile design minimizes seat-height change compared to inflatable pads, while enhancing comfort with its shock-absorbing construction. Manufactured of UV-stable materials, these seat pads resist fading when exposed to the sun. A. V-ROD® 5-SPOKE WHEEL – BLACK ICE
Brawn is back. Five big and beefy spokes define the distinctive hot rod styling, and the knife-edge shape provides an angular spin on the traditional custom wheel look. Treated to the exclusive Black Ice finish, these mirror-smooth wheels add an incredible depth and shimmer that is impossible to reach with an ordinary "black chrome" finish. Pick your styling direction; the rich black finish blends easily into a blacked-out bike, but the wet-look shimmer holds its own in the company of chrome as well. All Genuine Motor Accessory wheels have been certified by Harley-Davidson to perform to our tough vehicle standards for fit, quality and durability. Wheels require separate purchase of model-specific Wheel Installation Kit, Sprocket hardware and Brake Rotor-specific hardware. See I-sheet for details.

Fits '09-later VRSCF models and '12-later VRSCDX models.

55082-11 18" Rear.

The raised bosses on the hub carry the Original Equipment floating brake rotors, and add to the clean appearance of the installed wheel.

Windshields

A. DETACHABLE COMPACT WINDSHIELD FOR MODELS WITH AUXILIARY LIGHTING

Whether it's for keeping bugs off your face or warmth in your body, a windshield has a huge impact on rider and passenger comfort. By diverting air pressure past your chest and over your helmet, a windshield can add hours of riding comfort. This high-quality polycarbonate windshield mounts to the fork tubes with Detachable Docking Hardware *(sold separately)* for easy on-and-off convenience and a quick return to a stripped-down profile, and is shaped to fit models equipped with Auxiliary Lighting Kits.

B. VENTILATOR COMPACT DETACHABLE WINDSHIELD

In a nutshell, a windshield should provide a barrier between the rider and errant bugs, discarded cigarette butts, flying debris and bad air. The shield should manage airflow and wind blasts to create a pocket of still air for both rider and passenger comfort. But if you ride in a warm climate, or spend time at low speeds stuck in traffic, you need to keep some air circulating around your body to stay comfortable. The Ventilator Windshield features clear injection molded vents that allow you to adjust the airflow to match the riding conditions. Opening the vents redirects the air across your chest for a cooling effect, and closing the vents provides maximum wind and weather protection. But when you want to ride "naked," the Detachable shield can be removed completely and reinstalled in seconds to match your riding mood.

57400025 19" Clear.
Fits '88-later XL (except XL1200X, '11-later XL883L and XL1200C) and '91-'05 Dyna models (except FXDWG and FXDXT). Windshield dimensions: Overall height – 28.0"; width – 21.4".

C. QUICK-RELEASE TOURING WINDSHIELD

The Touring Windshield features an aerodynamic design shaped to provide hours of riding comfort. The additional center width directs airflow past the hand grips, and deflects rain and road debris around the rider. The windshield mounts to the fork tubes with elegant die-cast lever-release clamps, so the windshield does not require any "leave-behind" docking hardware. You get quick on-and-off convenience, and a clean, custom look. No tools are required, and the kit includes everything needed to install the windshield. The tough, hard-coated polycarbonate windshield features traditional chrome horizontal and vertical braces.

SEAT OF POWER

The right seat is equal parts ergonomics and comfort. Its shape anchors your position and determines the reach to the ground and to the controls, and the padding supports your tailbone and hips to relieve stress and pressure. Pick the right one for you — and your passenger.

PAMPER YOUR BEHIND

Experience ultimate comfort. Road Zeppelin® Seat Pads are equipped with a unique air bladder system that distributes rider weight across the entire seating surface. By reducing pressure points and providing shock absorption, this pad allows you to ride your cool low profile seat for hundreds of miles. The mesh cover lets air circulate beneath the rider's body, reducing the temperature between the rider and seat. The easy-to-reach integrated hand pump and air release valve permits quick and convenient adjustment.

CHANGING YOUR SEAT

Switching out your seat is simple. And because certain rides call for certain styles, some folks like to have multiple seats to match the occasion. Install a comfortable, supportive touring seat for the longer treks, and swap it out for a low-profile seat for a night on the town. Please see your owner's manual for proper removal and installation of seats.

SPORTSTER® SEAT TYPES

Solo or two-up, comfort or style, check out these seats to get an idea of where you want to sit.

LOW-PROFILE SEATS

These saddles combine radical styling with a "deep-in-the-bike" riding position. Long and lean, Badlander®, Brawler® and Sidekick® seats bring you lower to the ground than most other seats.

REDUCED REACH® SEATS

Get even closer. This Solo Seat is shaped to move the rider 3" forward and 1" lower for a confident reach to the hand and foot controls. The narrow nose brings the legs 1" closer together for a comfortable reach to the ground, and the scooped bucket-shape and back support keeps the rider from sliding backward during acceleration.

TOURING SEATS

Designed for comfort, Sundowner™ and Signature Series® seats offer a broad seating surface to reduce pressure points and a dished shape holds you in place and provides additional back support.

CUSTOM SEAT PROGRAM

A personalized seat is the perfect thread to tie your bike's attitude together. Select the stitching pattern, leather inlay and thread color that best support your custom movement, and you'll have your personalized seat in just three weeks. Choosing a Backrest

A sissy bar upright and passenger backrest are the starting point to build a complete touring machine. The backrest provides long-range comfort and support, and adds a feeling of control and confidence for the passenger. For permanent installation, choose rigid sideplates and a style of upright that suits your riding style. For added flexibility, choose a Detachable Sideplate Kit and appropriate Docking Hardware to make adding or removing a Detachable accessory a simple "slide and click" proposition.

Rigid Sideplates

A STRONG FOUNDATION

Being sure-footed at a stop or when parking your bike enhances your feeling of control and confidence. Adjusting the ride height by lowering the suspension may be the first step in fitting the bike to your inseam length. Combining a low-profile suspension and a narrow seat is the easiest way for a shorter rider to fit comfortably on a larger bike.

SUSPENSION

While most current Sportster® models are already equipped with low-profile suspension, Harley offers optional two-up shocks that maintain the low ride height and add additional carrying capacity. Or, if you are willing to exchange the low-profile "slammed" look for improved ride comfort, Comfort Flex standard-length shocks deliver an improved ride through a longer stroke.

ESTABLISH YOUR POSITION

HANDLEBARS

Where the bar positions your hands, wrists and arms directly affects how you feel on the motorcycle. The shape of the bar determines your reach to the hand controls and, therefore, your overall comfort.

REDUCED REACH STOCK REACH

Available for specific models, the Easy Squeeze Handlebar features an offset clutch-side grip that moves the palm 1/2" closer to the controls. The position provides improved leverage and permits the rider to reach the clutch lever with the stronger part of the hand.

FORWARD CONTROLS

Where your feet contact the controls can often determine how many miles you can put on in a day. Mid-controls position your feet below the knee for a sporting riding posture, while forward controls stretch your legs for a relaxed, laid-back posture.

C. VENTILATOR COMPACT DETACHABLE WINDSHIELD

In a nutshell, a windshield should provide a barrier between the rider and errant bugs, discarded cigarette butts, flying debris and bad air. The shield should manage airflow and wind blasts to create a pocket of still air for both rider and passenger comfort. But if you ride in a warm climate, or spend time at low speeds stuck in traffic, you need to keep some air circulating around your body to stay comfortable. The Ventilator Windshield features clear injection-molded vents that allow you to adjust the airflow to match the riding conditions. Opening the vents redirects the air across your chest for a cooling effect, and closing the vents provides maximum wind and weather protection. But when you want to ride "naked," the Detachable shield can be removed completely and reinstalled in seconds to match your riding mood.

SEAT OF POWER

The right seat is equal parts ergonomics and comfort. Its shape anchors your position and determines the reach to the ground and to the controls, and the padding supports your tailbone and hips to relieve stress and pressure. Pick the right one for you — and your passenger.

PAMPER YOUR BEHIND

Experience ultimate comfort. Road Zeppelin® Seat Pads are equipped with a unique air bladder system that distributed rider weight across the entire seating surface. By reducing pressure points and providing shock absorption, this pad allows you to ride your cool low profile seat for hundreds of miles. The mesh cover lets air circulate beneath the rider's body, reducing the temperature between the rider and seat. The easy-to-reach integrated hand pump and air release valve permits quick and convenient adjustment.

CHANGING YOUR SEAT

Switching out your seat is simple. And because certain rides call for certain styles, some folks like to have multiple seats to match the occasion. Install a comfortable, supportive touring seat for the longer treks, and swap it out for a low-profile seat for a night on the town. Please see your owner's manual for proper removal and installation of seats.

DYNA® SEAT TYPES

Solo or two-up, comfort or style, check out these seats to get an idea of where you want to sit.

LOW-PROFILE SEATS

These saddles combine radical styling with a "deep-in-the-bike" riding position. Long and lean, Badlander®, Brawler® and Sidekick® seats bring you lower to the ground than most other seats.

POSITION SEATS

Designed to place the rider in the best relationship to the controls, Reach® and Tallboy® seats position short and tall riders for a comfortable extension of the arms and legs.

TOURING SEATS

Designed for comfort, touring seats and passenger pillions offer a broad seating surface to reduce pressure points. The dished shape holds you in place and provides additional back support.

CUSTOM SEAT PROGRAM

A personalized seat is the perfect thread to tie your bike's attitude together. Select the stitching pattern, leather inlay and thread color that best support your custom movement, and you'll have your personalized seat in just three weeks. For more details, turn to page 728, or visit **www.harley-davidson.eu/mydreamharley/customseat**.

NOTE: Some Harley-Davidson® saddlebags are made of leather. Fine leathers or other natural materials WILL gain "character," such as wrinkles or wear, with age. This is normal. A fine, aged patina and character wrinkles are a sign of the extremely high quality materials used to construct your saddlebags. The appearance of scars or marks on the leather are a result of using natural leather panels and should not be thought of as an imperfection. A STRONG FOUNDATION

Being sure-footed at a stop or when parking your bike enhances your feeling of control and confidence. Adjusting the ride height by lowering the suspension may be the first step in fitting the bike to your inseam length. Combining a low-profile suspension and a narrow seat is the easiest way for a shorter rider to fit comfortably on a larger bike.

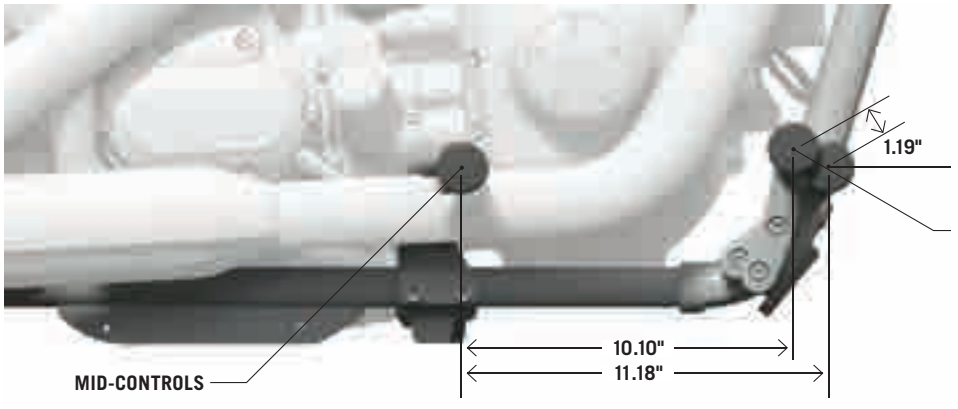

SUSPENSION
While most current Dyna® models are already equipped with low-profile suspension, Harley offers model-specific suspension options to lower non-current models.

HANDLEBARS
Where the bar positions your hands, wrists and arms directly affects how you feel on the motorcycle. The shape of the bar determines your reach to the hand controls and, therefore, your overall comfort.

FOOT CONTROLS

FORWARD CONTROLS

REDUCED REACH FORWARD CONTROLS

Where your feet contact the controls can often determine how many miles you can put on in a day. Mid-controls position your feet below the knee for a sporting riding posture, while forward controls stretch your legs for a relaxed, laid-back posture. A. WIND SPLITTER VENTED WINDSHIELD

Reduce helmet buffeting at speed. The Harley-Davidson® Wind Splitter Vented Windshield features an exclusive fingertip-adjustable center vent that reduces turbulence behind the windscreen. When open, the controlled airflow fills the negative pressure area behind the shield, and helps to smooth the flow of air over the top of the screen and around the rider. The revised flow reduces helmet bobbing and neck fatigue so you can comfortably spend more time in the saddle. The open vent also provides cooling airflow to the rider at low speeds and in city traffic.

Engineered to provide the riding comfort of a larger windshield, this low-profile screen's contemporary contour sets it apart from the crowd. The shape keeps the windshield below your siteline so you don't look through bugs and road grime, and the detachable design means you can ride without the shield when the mood strikes. The shield is formed of hard-coated polycarbonate for strength and scratch resistance, and the dark-smoked finish reduces glare. The slim polished stainless steel brackets mount to the Original Equipment rubber isolated docking points for ease of installation and removal.

B. VENTILATOR DETACHABLE WINDSHIELD

In a nutshell, a windshield should provide a barrier between the rider and errant bugs, discarded cigarette butts, flying debris and bad air. The shield should manage airflow and wind blasts to create a pocket of still air for both rider and passenger comfort. But if you ride in a warm climate, or spend time at low speeds stuck in traffic, you need to keep some air circulating around your body to stay comfortable. The Ventilator Windshield features clear injection-molded vents that allow you to adjust the airflow to match the riding conditions. Opening the vents redirects the air across your chest for a cooling effect, and closing the vents provides maximum wind and weather protection. But when you want to ride "naked," the Detachable shield can be removed completely and reinstalled in seconds to match your riding mood.

E. REAR FENDER BIB – FAT BOY MODELS

TALLBOY® SEATS
The correct riding position can help a tall rider sit comfortably on the bike, and avoid leg cramps and back strain during a long day in the saddle. For riders with a longer inseam, a Tallboy® Seat will put you on the road to fatigue-free riding. Designed to move the rider up and back from the stock seating position, a Tallboy Seat can eliminate the "knees-high" riding position, and effectively places the body for a natural arm and leg reach to the controls. Tallboy Seats feature a bucket-shaped design for added support, and a wide seating surface to reduce pressure on the tailbone.

B. TALLBOY SEAT – SMOOTH
This Tallboy Seat moves the rider back 2" and up 3" as compared to the Original Equipment seat. The new position allows additional leg and arm movement for the long-limbed rider, and a comfortable seating space for the open road. The Tallboy Seat features a smooth vinyl surface that complements many motorcycle models, and a wide pillion for added passenger comfort.

51469-06A

C. TALLBOY SEAT – SOFTAIL® DELUXE
Stitched and textured to match the nostalgic style of the Softail® Deluxe model, this Tallboy Seat moves the rider back 1.75" and up 2" as compared to the Original Equipment solo seat on the Softail Deluxe. The new position allows additional leg and arm movement for the long-limbed rider, and a wide pillion for added passenger comfort.

52852-05††
Fits '05-later FLSTN and FLSTNSE models. Seat width 15.0"; passenger pillion width 11.0".

Styled to match the Original Equipment solo seat, the Fender Bib features a textured leather insert to complete the nostalgic look. The molded base is finished with a soft felt underliner designed to protect the fender's painted surface.

NOTE: Some Harley-Davidson® saddlebags are made of leather. Fine leathers or other natural materials WILL gain "character," such as wrinkles or wear, with age. This is normal. A fine, aged patina and character wrinkles are a sign of the extremely high quality materials used to construct your saddlebags. The appearance of scars or marks on the leather are a result of using natural leather panels and should not be thought of as an imperfection. Please use Harley-Davidson Leather Dressing P/N 98261-91V to protect your investment.

NEVER IN A TIGHT SPOT

On the road, you've got to feel good in the saddle. Whether you're cruising around town or out for the long haul, your bike should feel like an extension of yourself. So, once you've picked the bike, it's time to choose the options that best equips your ride to your personal dimensions.

SUSPENSION

While many current Softail® models are already equipped with low-profile suspension, Harley offers optional front and rear lowering kits to tailor your bike to your size. Or, if you are willing to exchange the low-profile "slammed" look for improved ride comfort, Comfort Flex standard-length shocks deliver a superior ride through a longer stroke.

HANDLEBARS

Where the bar positions your hands, wrists and arms directly affects how you feel on the motorcycle. The shape of the bar determines your reach to the hand controls and, therefore, your overall comfort.

REDUCED CLUTCH REACH

REDUCED REACH

STOCK REACH

Available for specific models, the Easy Squeeze Handlebar features an offset clutch-side grip that moves the palm 1/2" closer to the controls. The position provides improved leverage and permits the rider to reach the clutch lever with the stronger part of the hand.

Windshields – Road King®

A. WIND SPLITTER VENTED WINDSHIELD

Reduce helmet buffeting at speed. The Harley-Davidson® Wind Splitter Vented Windshield features an exclusive finger-tip-adjustable center vent that reduces turbulence behind the windscreen. When open, the controlled airflow fills the negative pressure area behind the shield, and helps to smooth the flow of air over the top of the screen and around the rider. The revised flow reduces helmet bobbing and neck fatigue so you can comfortably spend more time in the saddle. The open vent also provides cooling airflow to the rider at low speeds and in city traffic.

Engineered to provide the riding comfort of a larger windshield, this low-profile screen's contemporary contour sets it apart from the crowd. The shape keeps the windshield below your site line so you don't look through bugs and road grime, and the detachable design means you can ride without the shield when the mood strikes. The shield is formed of hard-coated polycarbonate for strength and scratch resistance, and the dark-smoked finish reduces glare. The slim polished stainless steel brackets mount to the Original Equipment rubber isolated docking points for ease of installation and removal.

57400176

Fits '94-later Road King® models (except FLHRS). Does not fit with Mini Tach or Boom!™ Audio Cruiser Speakers Stock on '13-'14 FLHRSE. Windshield dimensions: Overall height – 22.4" height from headlamp opening –16.1", width – 20.3".

B. VENTILATOR KING-SIZE DETACHABLE WINDSHIELD

B. VENTILATOR KING-SIZE DETACHABLE WINDSHIELD

In a nutshell, a windshield should provide a barrier between the rider and errant bugs, discarded cigarette butts, flying debris and bad air. The shield should manage airflow and wind blasts to create a pocket of still air for both rider and passenger comfort. But if you ride in a warm climate, or spend time at low speeds stuck in traffic, you need to keep some air circulating around your body to stay comfortable. The Ventilator Windshield features clear injection-molded vents that allow you to adjust the airflow to match the riding conditions. Opening the vents redirects the air across your chest for a cooling effect, and closing the vents provides maximum wind and weather protection. But when you want to ride "naked," the Detachable shield can be removed completely and reinstalled in seconds to match your riding mood.

Windshields – Electra Glide®

A. WIND SPLITTER WINDSHIELD – BATWING FAIRING

In the world of functional performance, size does matter. After all, it's simple to understand that the larger the windshield area, the greater the amount of wind deflection. The Wind Splitter Windshield is a great look for all Touring models and is shaped for the perfect combination of effective airflow management and "wow" styling. The sweeping design complements the shape of the fairing and the inner dash panel, and adds height over a traditional low-profile wind deflector in the center where it counts. The shape decreases wind noise, and improves your ability to hear the motorcycle's sound system. The rich smoked finish does not interfere with your forward view, and looks great against any paint color. The easy-to-install Wind Splitter features a center-mount Bar & Shield medallion for a distinctive finishing touch.

Fits '96-'13 Electra Glide®, Street Glide® and Trike models. Does not fit with zūmo® 550 GPS Navigator, Windshield Bags or Pouches.

Tailor your bike to your size and riding style. For the best compromise between adequate protection from the elements and a clear view of the road ahead, select a windshield that tops out just below eye level. This reduces helmet buffeting while allowing a view unobstructed by dirt, bugs, and rain drops. Harley-Davidson® windshields are formed of hard-coated polycarbonate for strength and scratch resistance, and are available in a variety of heights and tints to suit your riding needs.

C. SPORT WINDSHIELD

Combine the mini-shield styling of a wind deflector with a little extra wind protection. This 10" Sport Shield features a traditional wind screen shape, but adds a forward "flip" to the trailing edge to deflect the air flow over the rider. You get a shield that's still easy to look over, but without the turbulence usually associated with a short wind deflector. The light-smoke shield is formed from hard-coated polycarbonate for strength and scratch resistance.

57400213 10" Light Smoke.
Fits '14 Electra Glide, Street Glide and Trike models.

D. BATWING FAIRING WIND DEFLECTOR – MEDIUM PROFILE

Style meets function. This 7" tall Wind Deflector splits the difference between the wind deflector and a low windshield, offering sport styling with a little greater wind protection. Harley-Davidson windshields are formed of hard-coated polycarbonate for strength and scratch resistance, and the dark smoke tint complements any paint color.

57400229 7" Dark Smoke.
Fits '14 Electra Glide, Street Glide and Trike models.

E. BATWING FAIRING WIND DEFLECTOR – LOW PROFILE

TALLBOY® SEATS

The correct riding position can help a tall rider sit comfortably on the bike, and avoid leg cramps and back strain during a long day in the saddle. For riders with a longer inseam, a Tallboy® Seat will put you on the road to fatigue-free riding. Designed to move the rider up and back from the stock seating position, a Tallboy Seat can eliminate the "knees-high" riding position, and effectively places the body for a natural arm and leg reach to the controls. Tallboy Seats feature a bucket-shaped design for added support, and a wide seating surface to reduce pressure on the tailbone.

E. TALLBOY SEAT – '08-LATER MODELS

ROAD ZEPPELIN® AIR ADJUSTABLE SEATS
The open road. That's where we developed and tested the revolutionary comfort of the Road Zeppelin® Seat. This remarkable seat removes pressure points and "hot spots" by adjusting the amount of air contained in each bladder within the seat. Easy-to-reach rocker switches on the side of the seat control the built-in compressor, adding and bleeding off air with the quick push of a button to help relieve stress from the lower back, tailbone or lower extremities. On a long run, occasionally inflating and deflating the air bladders reduces the "numb butt" effect by improving the blood flow to the extremities. So grab a seat. And enjoy the ride.

A. ROAD ZEPPELIN AIR ADJUSTABLE SEAT – '08-LATER MODELS
This Road Zeppelin Seat features two adjustment zones for the rider and one for the passenger, and an internal air compressor that adjusts the air level nearly twice as fast as the previous version. The ergonomically-friendly seat design features a narrow front nose for ease of touching the ground at a stop, with a wide seating surface for long range rider and passenger comfort. This seat is a great addition to Trike models too. The easy-to-clean vinyl seat is finished with an embroidered Road Zeppelin logo that lets everyone see that you take riding comfort seriously. This easy-to-install seat accepts a rider backrest and passenger grab rail for additional touring comfort.

Experience ultimate comfort. The air bladder system is designed to remove pressure points and provide shock absorption to reduce vibration. The mesh cover allows air to circulate beneath the rider's body, reducing the air temperature between the rider and seat. The easy-to-reach integrated hand pump and air release valve permits quick and convenient adjustment. Shaped to conform to most Harley-Davidson® seats, the pads feature an adjustable mounting strap and a non-skid surface to keep them in place.

A fine, aged patina and character wrinkles are a sign of the extremely high quality materials used to construct your seat or backrest. The appearance of scars or marks on the leather are a result of using natural leather panels and should not be thought of as an imperfection. Please use Harley-Davidson Leather Dressing P/N 98261-91V to protect your investment.

The cantilevered aerodynamic rails appear to float above the center spar, imparting a lighter-than-air profile. Hidden hardware adds to the clean design. E. HIGH OUTPUT CHARGING SYSTEM

E. HIGH OUTPUT CHARGING SYSTEM

Heated clothing, heated seats and grips, decorative lighting, and high-output audio systems place added demand on the motorcycle's charging system. The motorcycle's charging system ensures that adequate power (voltage and current) is being supplied to the core motorcycle functions – ignition, gauges, lighting and battery – as well as any additional powered accessories. When the charging system is unable to satisfy the power requirements of the system, the battery becomes a power source and begins to discharge. Repeated deep cycle charging shortens the battery's life – and can leave you stranded.

The Harley-Davidson® High Output Charging System is engineered to provide abundant power for all your accessories – at any engine speed. With 54 amps of output at 4,000 rpm, accessories will operate at their peak performance - no more dimming lights, reduced stereo volume or under-performing heated gear. The system-matched stator, rotor and voltage regulator work together to meet the current demands of your bike.

Sitting in traffic, riding in parades, or just hanging out on Main Street – your motorcycle spends almost 20% of its running time at idle. At low RPM, the motorcycle's charging system delivers the least amount of current, and relies on the battery to make up the difference. The High Output Charging System delivers a 30% increase in output at 1000 RPM, which translate to an additional 6 amps of current (or about 78 watts of power). Maximum power output of charging system is 793 Watts (based on constant voltage cold data).

Complete kit includes high performance rotor, stator, voltage regulator and all gaskets and hardware required for installation.

29900028
Fits '11-later Touring, '10-later CVO™ Touring and '09-later Trike models.

NEVER IN A TIGHT SPOT

On the road, you've got to feel good in the saddle. Whether you're cruising around town or out for the long haul, your bike should welcome you like an old friend and feel like an extension of yourself. So, once you've picked the bike, it's time to choose the suspension that best equips your ride to your personal dimensions.

A STRONG FOUNDATION

Being sure-footed at a stop or when parking your bike enhances your feelings of control and confidence. Adjusting the ride height by lowering the suspension may be the first step in fitting the bike to your inseam length. Combining a low- profile suspension and a narrow seatis the easiest way for a shorter rider to fit comfortably on a larger bike.

FOOT POSITION

Where your feet contact the controls can often determine how many miles you can put on in a day. Footboards position your feet just ahead of the knee for an upright riding posture, while forward controls stretch your legs for a relaxed, laid-back posture. For tall or long-limbed riders, extended reach foot controls and levers reposition your feet and stretch your legs to reduce a knees-in-the-air riding position.

C. PREMIUM RIDE HAND-ADJUSTABLE TOURING SHOCKS*

Experience the ultimate in superior ride quality with these Premium Touring Shocks. These shocks utilize a single tube, nitrogen charged emulsion design. The design offers enhanced compression and rebound damping compared to the Original Equipment-style air adjustable shocks. This provides a controlled yet plush ride with much less bottoming. The compression and rebound damping is split between the two shocks—compression on the right and rebound on the left. This design balances the load of each shock; stiff spring with rebound damping on the left and soft spring with compression damping on the right. Larger chambers (40mm diameter pistons and 14mm rods) allow these shocks to react more quickly to impacts. This keeps the tires tracking while minimizing harshness transmitted through the frame. A simple knob behind the left saddlebag allows the rider to conveniently modify the spring preload via a hydraulic adjuster. Available in Standard Ride Height and Low Ride Height versions.

54680-10 Low Profile.
Fits '09-later Touring models (except Trike). Does not lower '09-later FLHX, FLTRX and FLTRSE3 models. Stock on FLHRSE5, FLHXSE/2/3 and FLTRXSE/2 models.

***WARNING:** The Profile Low Front Spring Kit cannot be used independently and must be used with the appropriate Profile Rear Shock Lowering Kit. Installation of any accessory suspension components may affect cornering clearance and jiffy stand operation. This could distract the rider, causing loss of control and death or serious injury.

TOURING SUSPENSION AIR PUMPS

This pump was designed to allow safe and simple adjustment of the front and rear air suspension on Touring motorcycles. Unlike a bicycle pump or a fuel station air hose, the hand-operated pump with controllable "micro bleed" valve allows precise adjustment to air volume, and the "no loss" air connector maintains shock pressure when the fitting is removed. The swivel air hose simplifies valve stem attachment.

D. ANALOG TOURING SUSPENSION AIR PUMP

BUILDING A PERFORMANCE BIKE

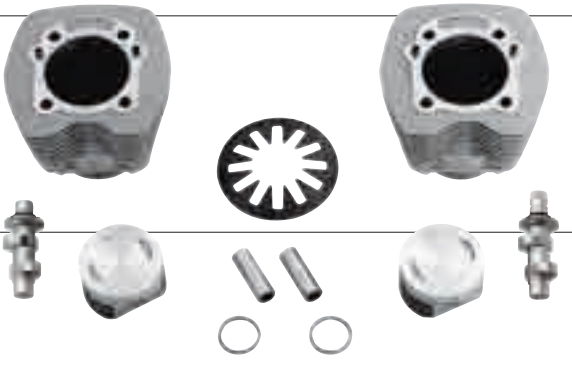

INTAKE & EXHAUST

Moving more air and fuel through the engine is the easiest (and most cost-effective) way to make more horsepower and torque. A free-flowing air cleaner and matching tuned exhaust will add performance you can feel. Heavy Breather and Stage I Free-Flow Air Cleaners are simple to install and bring a big performance boost for the dollars invested, and sweet-sounding Street Performance mufflers deliver power you can feel across a broad RPM range.

STAGE KITS

Screamin' Eagle® EFI Stage Kits offer complete street-legal performance configurations engineered to help you generate specific torque and horsepower gains. Eliminating all the guesswork and trial-and-error testing normally associated with engine modifications, Stage Kits include everything you need to enhance your bike's performance, including big-bore cylinders, high-compression pistons, performance cams and high-flow air cleaners.

PERFORMANCE TUNING

Tuning an EFI-equipped motorcycle for performance is similar to modifying a carbureted model, in that freer-flowing intake and exhaust systems will require more fuel. The Screamin' Eagle Street Tuner provides computer-based tools that record and edit the bike's ECM tuning tables. To optimize drivability and performance, the Street Tuner permits limited tunability within the EPA/CARB-compliant emissions range and records and displays real-time vehicle data on screen.

CAUTION ICONS

EC Accessories are covered by the EC wide vehicle type approval. No additional certificate required.

TÜV The TÜV has concluded that these accessories fulfill the conditions under the German Road Act (stVZO) and installing these accessories does not affect the vehicle approval.

Local requirements may vary. For more information, contact your local Harley-Davidson dealer.

WARRANTY & CAUTION

OVERVIEW

Harley-Davidson has the engineering expertise, sophisticated dyno lab and complete testing facilities to provide enthusiasts with a line of performance products designed to produce good, solid, reliable horsepower and torque. Engine-related performance parts are intended for the experienced rider only.

WARRANTY

Installation of Screamin' Eagle products, and similar off-road or competition products from other manufacturers, except some street-legal offerings installed by authorized Harley® dealers, may void your H-D® limited vehicle warranty. Installation of a California performance kit on a 49-state model motorcycle or a 49-state performance kit onto a California model motorcycle will void manufacturer's warranty, as it will not result in a street-legal configuration.

CAUTION

Harley-Davidson motorcycles modified with some Screamin' Eagle high-performance engine parts must not be used on public roads and in some cases may be restricted to closed-course competition.

Clean and restore the original performance of K&N air filter elements. The washable and rechargeable filters use a special coating to help filter fine particles from the incoming air. MORE THAN JUST HOT AIR

The sound of a Harley-Davidson® motorcycle grabs the heart and moves the soul. The complete line of Screamin' Eagle® Street Performance Mufflers is tuned to enhance the bass notes, and deliver a rich melodic tone from idle to wide-open throttle. These stylish slip-on mufflers produce real-world performance improvements, while maintaining EPA-approved sound levels.

POWER VS. NOISE

A loud exhaust system doesn't mean improved performance. Screamin' Eagle® Street Performance Mufflers are designed to significantly increase airflow and add torque and horsepower you can feel with a twist of the throttle. Engineered to deliver where it counts — during a roll-on pass or on a long run up a steep grade — all street-legal Harley-Davidson® exhaust systems carry the EPA stamp.

The "Room" — a silent chamber lined with perforated sheet metal and 50,000 pounds of fiberglass acoustic wedges — uses a wide array of microphones to get precise readings of drive-by noise. This is the room that creates that world-famous Harley-Davidson sound.

NOTE: Due to increased diameter of these mufflers some realignment of head pipes is usually required. It is recommended to replace exhaust port gaskets, P/N 65324-83A (stock) or P/N 17048-98 (performance), to avoid tendency of head pipes to return to original position when re-tightened.

NOTE: There is no warranty on exhaust pipes and mufflers with regard to any discoloration. Blueing is caused by tuning characteristics, cam timing, carburetor jetting, over-heating, etc. and is not caused by defective manufacturing.

SCREAMIN' EAGLE® STREET PERFORMANCE TUNER KIT

The Screamin' Eagle® Street Performance Tuner is designed to simplify management of street legal performance calibrations as EPA/CARB-compliant performance modifications are made. Once installed, the kit will allow you to upload the latest ECM calibrations for your bike's legal state-of-tune. Start with a high-flow air cleaner and Street Performance mufflers, and upload the calibration that provides the best performance mix. Add a Big Bore Stage I or Stage II Kit later, and simply download the proper ECM calibration to match the model and hardware. Plus, you have online access to the latest factory calibrations.

The kit includes the Vehicle Communications Interface (VCI) module with on-board memory that can record up to 15 minutes of run-time data. The module will store information on up to 27 variables that can be downloaded to your PC via an optional USB cable, allowing the rider or technician to view and evaluate engine operating parameters. With the included software, you can download and view the bike's air/fuel ratio, O2 sensor readings, engine speed and temperature, RPM and vehicle speed, throttle position, spark advance, and many more performance characteristics. The VCI will also record and display service codes for troubleshooting and diagnostics.

The Street Tuner software includes impressive features:

- Smart Tune Live – a dynamic and visual method to track and capture engine data simply by running the vehicle through a range of RPM and Throttle Positions. This feature reduces the time to modify existing VE (Volumetric Efficiency) tables which are then analyzed and tuned. Smart Tune Live works on models with factory-installed O2 sensors only.
- Interpolation of missing data derived from recordings, which reduces analysis time by automatically generating data that might be missed in the recording process.
- Viewable data meters doubled from 4 to 8 allowing users to monitor more real-time data. Users can now save and restore data meter configurations which are viewable in both traditional data modes and the new Smart Tune Live.
- Increased sampling rate to take advantage of the faster ECM data speeds found on select '11-later models (CAN protocol).
- Revised tuning tree with intuitive double click features.

NOTE: Street Tuner permits limited tunability within the emissions range to optimize drivability without compromising emission levels. It also features expanded tuning options outside of the emissions range to optimize performance.

Performance Cams

CHOOSING CAMSHAFTS
Camshafts are a fundamental ingredient in the performance recipe, because they control the timing and duration of all major engine events. They are the primary means by which you can tune your engine's horsepower and torque output. Every cam has unique lift and overlap performance characteristics, which means you need to select cams based on exactly the kind of power you're looking for.

While hot cams, higher-flowing cylinder heads and a free-flowing exhaust system will move the peaks higher up the rpm band, conservative cams may feel stronger to a street rider because the maximum torque occurs at lower rpm. The experts at your Harley-Davidson® dealer have the knowledge, skill and experience to recommend the optimum cam specifications for your riding demands.

SCREAMIN' EAGLE® TWIN CAM PERFORMANCE CAMS
Kits include front and rear cams. Splined rear cam is included for exceptional load handling capability. Gaskets and bearings not included. Dealer installation is recommended, and special tools are required for proper installation. All EFI models require ECM calibration.

SE-204 Cam Kit
This midrange torque bolt-in cam produces peak horsepower around 5800 RPM and installation does not require any headwork or performance valve springs. Should be used in conjunction with open intake and exhaust.

25464-06

SE-254E Cam Kit
This cam provides great low end torque along with good midrange. A good "all-around" cam, the SE-254E is a good match for a light Touring bike – Road King®, Street Glide® or Road Glide® Custom – when the aggressive rider desires a little more top-end horsepower. In a 0-60 sprint or ¼ mile drag race, the SE-254E-equipped model would pull ahead of an identical model with an SE-255 cam.

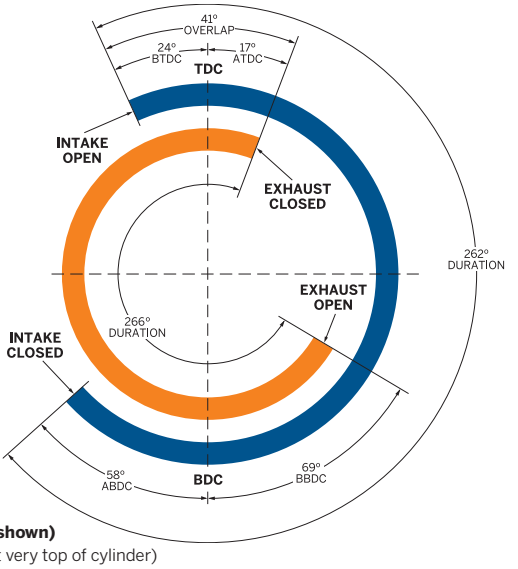

25503-10
Street legal on '11-'13 103CI Touring models.

SE-255 Cam Kit
The ultimate in torque cams, this cam offers substantial increase in low end torque for engines up to 110 cubic inches with compression ratios up to 10 to 1. The low end torque increases are great for heavy bikes or for the person who routinely shifts below 4500 RPM and wants the power available to pass without downshifting. The cam still makes peak power above 5000 RPM so people with lighter bikes will enjoy the torque increases without feeling like the bike runs out of air at higher engine speeds.

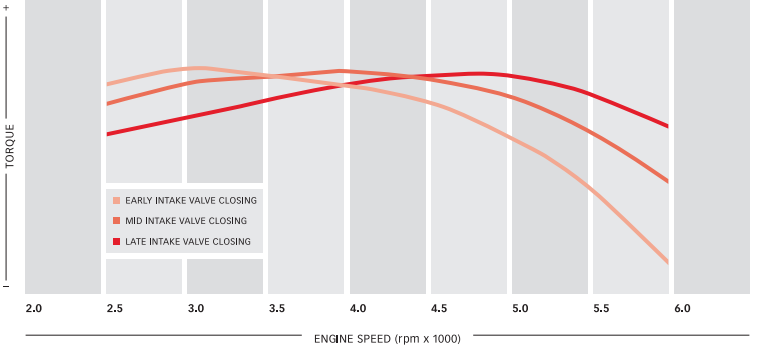

25638-07
Street legal on '09-'13 Dyna®, Softail® and Touring models with 103CI and 110CI engines.

SE-259E Cam Kit
Developed specifically for throttle body EFI systems, this cam has a modern lobe design that allows for higher valve lifts for a given duration. A high-lift version of the SE-211 camshaft, this cam works great with 103 cubic inch and larger engines with free-flowing intake and exhaust. It can be used with stock heads (updated with race springs) and high-compression pistons for even more torque than a SE-211 cam, or can be coupled with any of the performance heads to realize the full power potential.

25482-10
Street legal on '11-later 103CI and 110CI Touring models.

Valve Timing Events (SE-266E shown)
TDC = Top Dead Center (piston at very top of cylinder)
ATDC = After Top Dead Center
BTDC = Before Top Dead Center
BDC = Bottom Dead Center (piston at very bottom of cylinder)
ABDC = After Bottom Dead Center
BBDC = Before Bottom Dead Center

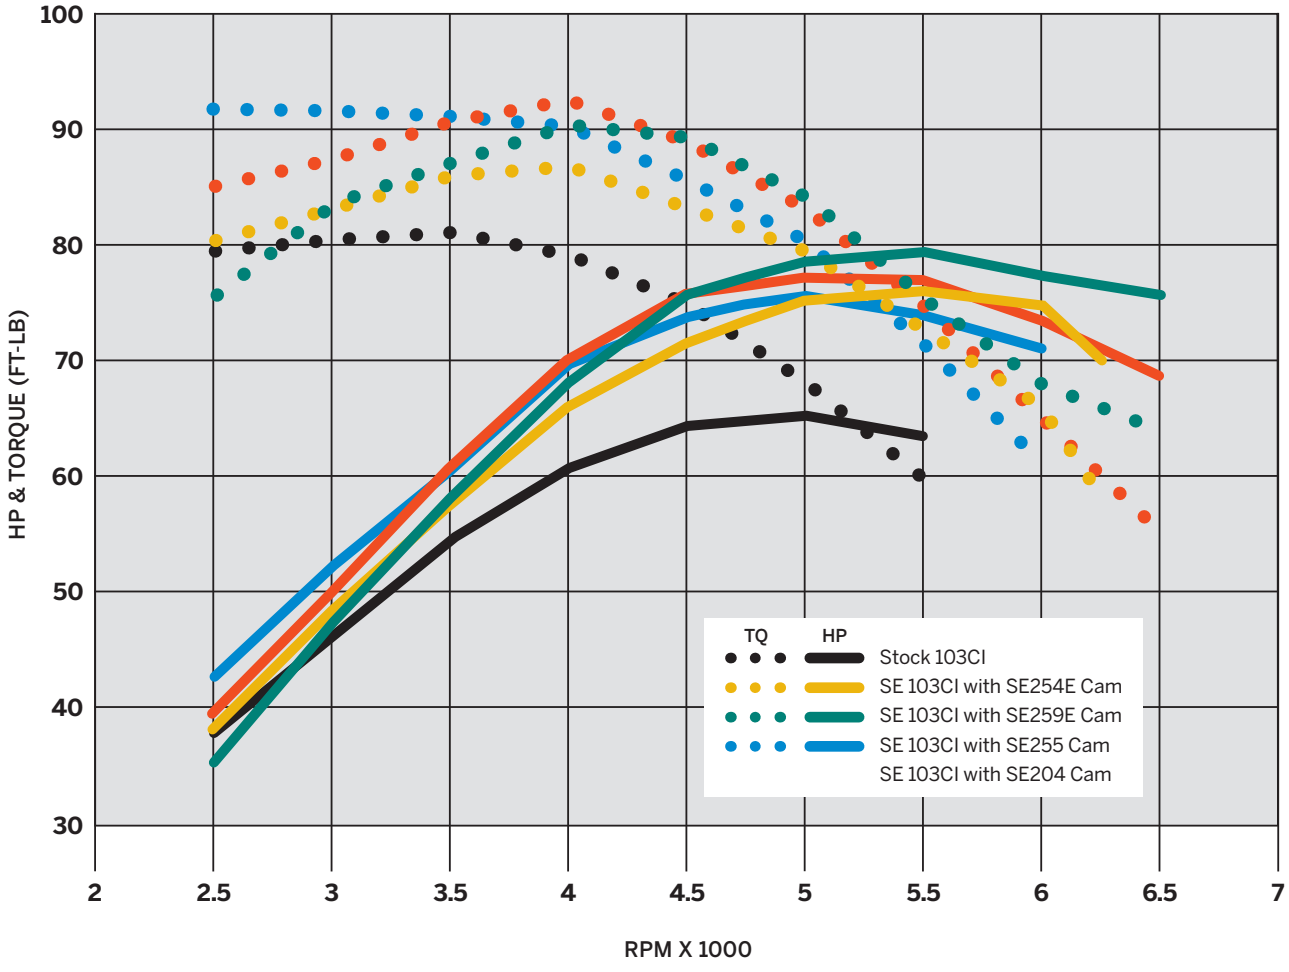

SELECTING A CAMSHAFT BY THE NUMBERS
The intake closing point relative to bottom center listed in the table on page XXX can be used as a general indicator for the shape of the torque curve. Earlier intake closing values will result in higher torque at low engine speeds (along with lower horsepower at higher engine speeds). Later intake values will result in higher horsepower at high engine speeds (along with lower torque at low engine speeds).

Intake Closing (degrees ABDC)	
Less than 30°	Early intake closing indicates a low-speed torque cam.
30° – 50°	Medium intake closing indicates a midrange torque cam.

A. SCREAMIN' EAGLE® BILLET CAM SUPPORT PLATE WITH HIGH-VOLUME OIL PUMP

A great upgrade for any performance motor. The Billet Cam Support Plate is manufactured from billet aluminum with pressed-in bronze bushings, and is pre-assembled with the crankshaft bushing and oil pressure relief valve. Aluminum is specified at 6061 billet plate, heat-treated to T6 specifications with a surface-hardened anodized finish to provide superior strength, rigidity, and durability. CNC-precision machining ensures precise dimensions and constant material thickness across the plate, enabling perfect alignment of cams and chains. Cam bushings are made from 660 bronze materials to provide enhanced wear resistance, and to stand up to increased loads from the high lift cams common in large displacement motors. The improved Screamin' Eagle® high-flow oil pump provides higher pressure when the oil is hot to keep pressure drops to a minimum, and increases the oil supply by 16% and the scavenging by 29% over the '06-later Original Equipment oil pump.

25282-11

Fits '06-later Dyna®, '07-later Softail® and Touring models. Installation requires separate purchase of Cam Service Kit P/N 17045-99D and Drive Gear Retention Kit P/N 25566-06.

A. SCREAMIN' EAGLE BILLET CAM SUPPORT PLATE WITH HIGH-VOLUME OIL PUMP

B. SCREAMIN' EAGLE HYDRAULIC CAM CHAIN TENSIONER AND HIGH-FLOW OIL PUMP UPGRADE KIT

This kit updates the cam chain tensioner of your Twin Cam 88® engine to the latest design, as featured on the Twin Cam 96™ engine. The billet cam support plate has been designed to allow the installation of the Twin Cam 96 hydraulic cam chain tensioner to Twin Cam 88-equipped models. These Hydraulic Cam Chain Tensioners will significantly outlast the spring loaded tensioners, and are an ideal addition to an engine modified for improved performance. In addition, '02-'06 models utilize a Twin Cam 96 single row front roller chain and sprocket (included in kit). '99-'01 models use Original Equipment front silent chain and sprocket to retain the cam position sensor function. The kit includes an improved Screamin' Eagle High-Flow Oil Pump that provides increased oil pressure at high-operating temperatures. This kit increases the oil supply by 23% and scavenging by 50% when compared to the '99-'05 Original Equipment oil pump, and reduces operating temperature of bearings to improve bearing life.

25284-11

Fits '99-'05 Dyna models, '00-'06 Softail models and '99-'06 Touring models. Installation requires separate purchase of Spacer Kit P/N 25285-08, Cam Service Kit P/N 17045-99D and Drive Gear Retention Kit P/N 25533-99A.

B. SCREAMIN' EAGLE HYDRAULIC CAM CHAIN TENSIONER AND HIGH-FLOW OIL PUMP UPGRADE KIT

C. SCREAMIN' EAGLE HIGH CAPACITY OIL PAN

Keep your engine running cooler with by increasing your Touring bike's oil capacity. A great addition to a high-performance motor, or for the rider that tours in extreme temperature conditions, the Screamin' Eagle cast-aluminum oil pan is designed to increase the oil capacity by 1.5 quarts over the Original Equipment pan. Increased capacity means the oil cycles through the engine less frequently and the oil can remain in the pan for a longer period of time. The cast-in internal baffles manage the flow to the oil pickup, and keep the hot oil exposed to the heat-conducting ribbed aluminum sump. Kit includes cast aluminum oil pan and pan gasket.

A. SCREAMIN' EAGLE® TWIN CAM PERFORMANCE ASSIST AND SLIP (A&S) CLUTCH KIT

Developed for the high-thrust 110ci engine featured as Original Equipment on '14 Screamin' Eagle® CVO™ models, this A&S clutch provides significantly increased torque-handling capacity. Clutch is designed to improve engagement grip, and provides minor slippage during downshifting to reduce shock to the power train. Reduces hand lever pull effort by over 1 pound. Complete kit features improved clutch plates for enhanced wear resistance, and is the perfect addition when installing a high-output Screamin' Eagle Stage Kit.

37000026
Fits '14 Touring models with hydraulic clutch actuator.

B. SCREAMIN' EAGLE VARIABLE PRESSURE CLUTCH

Get more performance from the Original Equipment clutch. The Screamin' Eagle Variable Pressure Clutch is designed to help put the added power from a Screamin' Eagle Stage Kit to the pavement. This bolt-on kit harnesses the centrifugal force of spinning weights to increase the clutch capacity as engine speed increases. The mechanism applies increasing pressure to the stock clutch pressure plate as RPM rises. The result: High torque-handling capabilities without increasing clutch lever effort at idle. The Variable Pressure Clutch also provides smoother clutch disengagement at lower speed. Kit fits behind most stock derby covers with no modifications. See installation manual for additional accessory derby cover fitment information.

To match the performance demands of your engine, team the Variable Pressure Clutch with your choice of clutch diaphragm springs. We recommend the higher capacity Screamin' Eagle Diaphragm Spring P/N 37951-98 for major performance upgrades.

	Lever Effort	Torque Capacity

H. SCREAMIN' EAGLE PERFORMANCE SLIPPER CLUTCH FOR VRSC™ MODELS

This clutch offers reduced lever effort and improved performance. The unique "slip and assist" ramp system opens the two halves of the clutch hub slightly during high loads to the drivetrain, allowing a moderate slip that reduces shock to the drivetrain during rapid downshifting. The resulting reduction in wheel hop allows maximum contact between the tire and the road in wet or slippery conditions. Clutch lever effort is also reduced by 20% in 1130cc and 30% on 1250cc applications.

37938-08KA

A. SCREAMIN' EAGLE® 6-SPEED TRANSMISSION AND GEAR SET

Designed from the ground up, the Screamin' Eagle® transmission incorporates many of the best Original Equipment features, like late-style shifting mechanism and a newly designed "shift ring" system to make this the smoothest shifting Harley-Davidson® transmission available. The "shift ring" system is similar to the system used in the VRSC™ transmission, and it slides on the shafts to mate into the gears. This eliminates sliding heavy gears to accomplish the shift, and results in smooth, precise and light effort shifting. Sixth gear is a true overdrive, at a .89:1 ratio, and the first five gears mimic today's proven 5-speed ratios. The overdrive feature allows you to run a lower engine RPM in sixth gear, at any given road speed. Lower RPM can result in lower vibration, longer engine life and smoother cruising. The Screamin' Eagle 6-Speed Transmission is available as a complete transmission, or as a replacement gear set, and can be matched with hydraulic or cable-operated clutch controls.

Screamin' Eagle 6-Speed Transmissions feature forged chrome "trap door," forged shifter forks and forged and precisely ground gears. No speedometer or exhaust mount modifications are required. Complete transmissions are ready to install into the chassis, and the 6-Speed Gear Set Kits are designed to replace the stock gear set without removing the transmission. Gear Set Kits require slight modification (template included) to the Original Equipment transmission case, and include all necessary installation hardware.

Burst Collection

THE BURST COLLECTION

Split with tradition. The Burst Collection takes your ride in a new hard-edged direction. With a rich mixture of tuxedo black and machined aluminum finishes, each component in this complete collection is designed to tie the look together. The combination of contrasting edges and the light-enhancing machined pattern makes a powerful visual statement that complements classic and contemporary customizing styles. The Burst Collection components create an impact all by themselves, but can also be seamlessly combined with Edge Cut and othergloss black accessories to complete the look.

A. THE BURST COLLECTION ENGINE COVERS

The Twin Cam engine is the focal point of your motorcycle, so dress it with pride. Burst Collection Engine Covers set the stage for a complete custom look. We start with beautifully polished cast or billet parts that are engineered to fit the bike perfectly. Designed to complement the Burst Collection, this radical low profile air cleaner features a "tuxedo black" surround that has been expertly machined to expose the satin aluminum finish below. The billet cover conceals a one-piece cast back plate with integral breather and mounting bracket that promotes smooth air flow into the throttle body. The exposed reverse cone synthetic element provides high-volumes of air, and the element is washable for maximum efficiency and protection. The complete kit includes Burst Collection trim, backing plate, air cleaner element, and all required installation hardware. All EFI-equipped models require ECM calibration* *(priced separately)*.

Oil Coolers – Big Twin

PREMIUM OIL COOLER KITS

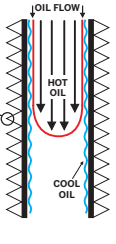

This oil cooler was designed specifically for Harley-Davidson to out-perform all other coolers in the industry. The cooler features a unique "Turbulator" system that evenly distributes oil across the cooling chambers. The air fins are designed to efficiently dissipate heat. The oil cooler has been designed to simplify installation and enhance performance. The large heat exchanger provides excellent cooling efficiency. The kit features a one-piece adapter plate with integrated thermostat that allows oil lines to connect to the oil filter bracket. Thermostat activates at 185°F (85°C). Kit comes complete with mounting hardware and precut oil lines.

Inside View of Premium Oil Cooler with Turbulators

Turbulators disperse and mix oil inside cooler to provide more efficient cooling capabilities. The cooler oil is not allowed to remain along the boundaries of the flow tube as in conventional coolers.

Inside View of Conventional Oil Cooler without Turbulators

Coolers without the Turbulator system allow oil to flow only in a straight path. Oil does not mix and the cooler oil remains along the outer boundaries, while the hotter oil remains along the center path of flow. Without the mixing effects of the Turbulators, the conventional oil cooler provides less efficient cooling capabilities.

CONTROLS

2014
HARLEY-DAVIDSON®

Take building your custom firmly into your own hands—after all, the most visible contact point with your bike is where you grasp the controls. Start with a handlebar that feels most natural to you, then underscore the direction of your ride with grips, hand controls, footpegs and mirrors.

HEATED HAND GRIPS
Keep comfortable on those cool mornings or frigid night rides. Warm hands have a major impact on overall body comfort and sometimes gloves just aren't enough. These thermostatically controlled grips feature variable heat settings controlled with a military grade resistor, and use automatic temperature monitoring to adjust to ambient temperatures. With both hands on the grips, they will remain at a constant temperature regardless of changes in outside temperature. The self-contained control circuit and control knob means you have no additional switches or controller boxes to mount, and the grips are switched on/off with the ignition to avoid draining your battery. The "glueless" grip design allows grip removal if you change handlebars or motorcycles.

A. HEATED HAND GRIPS – SLIPSTREAM
Slipstream Grips have been thermally mapped to provide a more uniform heat and are designed to achieve a maximum operating temperature approximately 20° Fahrenheit warmer than previous accessory heated grips for added warmth during cold rides.

56100027
Fits '08-later Touring, Trike, FLSTSE2/3, FXSBSE and FLSTNSE models. '14 Touring models require separate purchase of Electrical Connection Kit P/N 69200722. Not for use with internally wired handlebars.

B. HEATED HAND GRIPS – STREAMLINER COLLECTION
Complement the Streamliner look with these matching grips. The rich black rubber provides a positive grip while riding and the chrome tri-line design will provide just the right touch of chrome. These grips have been thermally mapped to provide a more uniform heat and are designed to achieve a maximum operating temperature approximately 20°Fahrenheit. warmer than previous accessory heated grips for added warmth during cold rides.

56100047
Fits '08-later Touring, Trike, FLSTSE2/3, FXSBSE and FLSTNSE models. '14 Touring models require separate purchase of Electrical Connection Kit P/N 69200722. Not for use with internally wired handlebars.

H. X² FOOTPEG KIT

E. HEEL RAISER FOOTPEG KIT

Comfort and cool, clean looks in one. Heel Raiser Chrome and Rubber Footpegs provide a large surface area that lets you change foot position for maximum comfort, and the fold-out heel rest provides footboard-style support that relieves calf and thigh tension on the highway. The heel rest can be deployed or retracted with your boot while riding. The sole-gripping horizontal black rubber bands complement the mirror-chrome finish, and add vibration isolation and a rich appearance to the pegs. Heel Raiser mounts to the standard H-D® style footpeg support, so it can be used in many rider and passenger applications.

50178-09

Fits H-D male mount-style footpeg supports (except the rider position on mid-control models, '02-later VRSC™, '07-later, XL1200N, XL1200V, XL1200X, '11-later XL1200C, FLS, '08-later FXCW, FXCWC, FXS, FXSB, FXSBSE and passenger position on Softail® models). Mini Footboards mount to standard H-D style footpeg supports, and can be used in many rider and passenger applications. A little larger than a bicycle pedal, Footboards can be pivoted to the proper angle for maximum riding comfort. The sole-gripping horizontal black rubber bands complement the mirror-chrome finish, and add vibration isolation and a rich appearance to the pegs. Complete the look with Shifter Pegs and Brake Pedal Pads from the Chrome and Rubber Collection.

50451-09

MAKE IT FIT

Riding your bike is a lot more fun when all the controls feel natural to operate. A properly adjusted motorcycle can add another hundred miles to a comfortable day's ride, and will build confidence when attacking a winding back road.

Visit *www.harley-davidson.eu/mydreamharley*.

COMFORT UP FOR GRABS

Choosing a bar is about more than just style, it's about how you approach the road. Where the bar positions your hands, wrists, and arms directly affects how you feel on the motorcycle. For every set of bars, there are three factors at work: Rise, Pull-Back and Width. These three measurements determine your reach to the hand controls and, therefore, your overall comfort and feeling of control.

Not all products are available in all countries – please consult your dealer for details.

CUSTOM BRAIDED CONTROL CABLES

Dress your bike for maximum impact. Harley-Davidson offers a selection of braided cable and brake line finishes to complement your customizing style. All cables and brake lines feature a clear anti-yellowing outer jacket that provides superior scuff protection and easy maintenance. Available in stock and plus lengths for custom applications.

CONTROL CABLES & BRAKE LINES

DIAMONDBACK™ BRAIDED CONTROL CABLES & BRAKE LINES

Diamondback™ braided cables and lines feature a brilliant metallic finish that blends perfectly with chrome handlebars and controls, or provides a stark contrast to "blacked-out" options. Fittings are finished in mirror chrome.

DIAMOND-BLACK BRAIDED CONTROL CABLES & BRAKE LINES

Diamond-Black braided cables and lines utilize a black braided wire to provide a deeper, truer, black braided finish you can see from a distance. Fittings are matched in black chrome to provide a sinister look for your ride.

SELECTING CABLES & BRAKE LINES

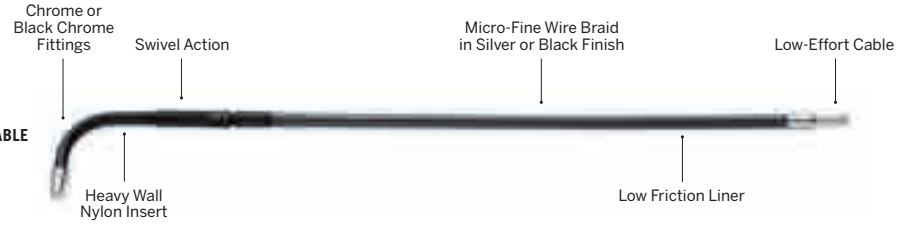

For Original Equipment applications (stock handlebars and risers): Locate the model and year of vehicle on pages 826–828 and 830–832. Applicable stock length part numbers are listed for each available finish.

For Custom Applications (custom handlebars and/or risers): Alternate length cables are listed in the corresponding platform tables on page 829 and 833. If you require assistance in determining the appropriate alternate length for your application, ask your Harley-Davidson® Dealer.

COMFORT, STYLE OR BOTH?

Every person is unique. Your overall height, arm reach, upper body length, and riding style all dictate your relationship to the bike's controls. Add in the desire for a unique, custom look and your handlebar options multiply exponentially.*

CHOOSING YOUR HANDLEBAR

RISE is the vertical distance between a handlebar's tip and its base. Adding risers to bars that sit too low can help put hand grips into your sweet spot.

PULL BACK is the distance the handlebar tips come back toward the rider. Greater pull back can eliminate the long reach to the bar for a shorter rider.

WIDTH is measured from tip-to-tip. Make sure the bar isn't too wide so it pulls your hands off the grips when turning.

KNURL CENTER is the distance between the centerline of the bar's knurling. The measurement should match the riser dimension to maximize clamping pressure.

STRENGTH & QUALITY

Harley-Davidson® accessory bars undergo the same rigorous testing as our factory handlebars, ensuring durability and control that others can't match.

YOUR RIDING POSITION

DRAG HANDLEBAR

Narrow, flat and more aggressive, drag bars provide a straight elbow and neutral hand and wrist position. For maximum comfort, drag bars can be positioned with curved or straight risers to minimize stretch to the controls.

APE HANGER & TALLBOY® BARS

Tall and wide, ape hanger and Tallboy® handlebars provide a classic "fists-in-the-wind" look, and can add long-haul comfort for riders with long arms. Because handlebar height is regulated in many areas, check local laws before installing a tall handlebar.

BEACH BAR

Low and wide, a beach bar spreads your arms and gives you room to breathe. Ideal for the rider with long arms, beach bars can be a little too wide for many riders. While selecting a bar, make sure you can reach the hand controls when the handlebar is fully turned.

FIT SHOP TIPS

H-D FIT SHOP

Your Dealer can help you with this simple experiment, and recommend a handlebar that matches your ideal riding position. For more information, visit **www.harley-davidson.eu/mydreamharley.**

To get an idea how well your bike fits you, you can try this simple test. Block your bike so that it is level and stable, sit on the bike in your normal riding position, and let your hands and arms hang down at your side. Now, close your eyes, and reach out to where you think your ideal handlebar should be. With your hands grasping an imaginary handlebar, place them where they feel the best... that is, rotate your wrists to a natural position, and spread your hands to a width that feels comfortable. Now open your eyes. This is where your bike's hand grips should be.

*NOTE: Installation of some handlebars and risers may require a change in clutch and/or throttle cable and brake hose for some models.

RIDER BASICS

You may think you are perfectly happy with the way your bike is adjusted. But that doesn't mean that it is correctly set up for you. We get used to our bikes—our muscles become trained and we end up accommodating the bike. It is far better to take the time to make the bike accommodate you.

If you are satisfied with your handlebar's width and wrist position, but wish it was just a little higher, lower, or closer to you, your dealer can recommend a set of handlebar risers that move the bar into your comfort zone.

ADJUSTING YOUR HAND POSITION

STOCK HANDLEBAR

Just about every model of Harley-Davidson® motorcycle comes with a different stock handlebar. Selected to complement the style of the bike, the handlebar may be the ideal shape for many riders, but of course, not everyone has the same physical characteristics.

STOCK HANDLEBAR WITH RISERS

If the stock handlebar has the correct width and hand position for you, but seems just a little too far away, we offer riser kits that bring the controls within reach. Straight and curved risers are available for many model and handlebar combinations.

FIT SHOP TIPS

HD FIT SHOP

Here are a few options to consider when outfitting your bike to fit you. Find your model and flip to the pages for more information. For more details, visit **www.harley-davidson.eu/mydreamharley.**

Getting the fit right may be as simple as adjusting the Original Equipment handlebar and controls. With the bike blocked in the upright position and you in the saddle, your Dealer can loosen the handlebar clamp and rotate the bar for a closer match to your ideal fit.

Once the grips fall naturally to hand, your Dealer can also adjust the hand control lever position. Rotating the switches and levers to a level position puts your wrists in a relaxed position, and reduces the strain of lifting your fingers to reach a too-high lever.

*NOTE: Installation of some handlebars and risers may require a change in clutch and/or throttle cable and brake hose for some models.

2014
HARLEY-DAVIDSON®

Better-sounding tunes, and a better sense of direction. Concert-hall quality Boom!™ Audio sound system components keep you entertained at every turn, while user-friendly, easy-to-read Road Tech™ GPS navigation equipment helps keep you from taking a wrong turn.

THE CHOICE IS CLEAR

Harley-Davidson® Boom!™ Audio is an exciting collection of integrated audio components designed to combine the maximum number of features with an easy-to-use interface. And because your bike's Original Equipment radio is designed for plug-and-play integration of Boom! Audio equipment, you can easily create the custom sound experience you've always wanted.

BIKE-TO-BIKE COMMUNICATIONS KIT
Bike-to-Bike system allows you and your passenger to talk with other riders, even when you are miles apart. Integrated CB features easy to use handlebar controls and will mute the radio while in transmit or receive mode.

BASS BOOSTER PORTS
Boost bass response without adding a subwoofer. Standard equipment on many 2014 Electra Glide® models, and available for 2006-2013 models, these open ports permit the rear speaker pods to "breathe," using the Tour-Pak air space for a 21% increase in bass response and an 82% reduction in distortion.

FAIRING SPEAKERS
Capture every note. Designed for maximum performance in the harsh motorcycle environment, these waterproof two-way speakers feature increased sensitivity for 25% louder output, reduced distortion and improved clarity at speed.

TOUR-PAK® SPEAKERS
Surround yourself with sound. Forward-facing two-way speakers feature waterproof tweeters and injection-molded woofer cones with high-flux Neodymium magnets, and are sized to be a direct replacement for the factory speakers.

AMPLIFIERS
When loud just isn't loud enough. Rugged Fairing, Tour-Pak® and Saddlebag-mounted amplifiers provide increased volume, lower distortion, reduced clipping and fuller sound that cuts through wind and road noise.

Not all products are available in all countries – please consult your dealer for details.

FAIRING LOWER SPEAKERS
Nestled into the glove boxes of your vented fairing lowers, these vibration-tested waterproof two-way speakers feature rider directed tweeters for clear, crisp sound.

SADDLEBAG LID SPEAKERS
Directionally optimized for improved rider acoustics, these waterproof 5"x7" two-way speakers turn the latched and gasket-sealed saddlebags into large speaker enclosures for enhanced bass response.

Take your music to the streets. Boom!™ Audio Amplifier Kits allow you to crank up the volume with significantly less distortion. The amplifier provides more power than Original Equipment radio alone, resulting in increased volume, fuller sound reproduction, reduced clipping, and lower Total Harmonic Distortion (THD) than head unit alone. Unlike aftermarket amplifiers that connect between the radio and the speakers, the Boom! Audio amplifier bypasses the radio's internal power amp to produce the cleanest sound possible. The Boom! Audio Amplifier boosts the pure source signal, minimizing any distortion generated through the speaker output. The system-matched high-output signal features optimized sound equalization for crisp, clear vocals and maximum bass response, and the strong midrange response cuts through wind and road noise. C. HIGH OUTPUT CHARGING SYSTEM

Heated clothing, heated seats and grips, decorative lighting, and high-output audio systems place added demand on the motorcycle's charging system. The motorcycle's charging system ensures that adequate power (voltage and current) is being supplied to the core motorcycle functions–Ignition, gauges, lighting and battery–as well as any additional powered accessories. When the charging system is unable to satisfy the power requirements of the system, the battery becomes a power source and begins to discharge. Repeated deep cycle charging shortens the battery's life–and can leave you stranded.

The Harley-Davidson High Output Charging System is engineered to provide abundant power for all your accessories–at any engine speed. With 54 amps of output at 4,000 rpm, accessories will operate at their peak performance–no more dimming lights, reduced stereo volume or under-performing heated gear. The system-matched stator, rotor and voltage regulator work together to meet the current demands of your bike.

Sitting in traffic, riding in parades, or just hanging out on Main Street–your motorcycle spends almost 20% of its running time at idle. At low RPM, the motorcycle's charging system delivers the least amount of current, and relies on the battery to make up the difference. The High Output Charging System delivers a 30% increase in output at 1000 RPM, which translate to an additional 6 amps of current (or about 78 watts of power). Maximum power output of charging system is 793 watts (based on constant voltage cold data).

Complete kit includes high performance rotor, stator, voltage regulator and all gaskets and hardware required for installation.

*NOTE: It is possible to overload your motorcycle's charging system by adding too many electrical accessories. If your combined electrical accessories operating at any one time consume more electrical current than your vehicle's charging system can produce, the electrical consumption can discharge the battery and cause vehicle electrical system damage. Ask your dealer for advice about the amount of current consumed by additional electrical accessories.

STEP INTO THE LIGHT

Believe it or not, chrome isn't the brightest accessory you can use to customize your ride. Harley-Davidson offers a variety of lighting options that can add the perfect finishing touch to nearly any part of your bike.

This Road King® Classic model is equipped with amber Electra Glo™ Rider Footboard Inserts, an amber Electra Glo Light Pod Starter Kit, and four Light Pod Expansion Kits.

A. ELECTRA GLO™ LIGHT POD KIT*

Light up the night. These compact LED Light Pods radiate a neon-like glow to accent almost any part of the motorcycle. Featuring a solid-state circuit board sealed against the weather, these self-adhesive lights can be placed under the tank, behind the air cleaner, or almost anywhere your imagination takes you. Electra Glo™ LED lighting draws minimal amperage, allowing lights to be left on for hours when parked. Light Pods connect directly to the motorcycle wiring harness, and the one-way wiring simplifies installation.

The complete kit includes 6 light pods, basic wiring in a selection of lengths, adhesive wire ties, and a compact on/off switch with rheostat to control the lighting intensity. Available Expansion Kits provide plug-in installation of additional lighting.

The surface explodes with brilliant LED lamps, washing the surface in light, and reflecting off of the chrome engine and exhaust trim. The effect is magical and hard to match with "neon" strips. Available with blue, red, purple or amber LEDs, the colors are tinted to match the available Electra Glo Light Pods. Inserts fit traditional D-shaped footboards, and are easy to install with pre-terminated wiring that plugs into the factory harness. No cutting or splicing is necessary.

WHEELS

2014
HARLEY-DAVIDSON®

Get your dream ride moving with nostalgic laced wheels, contemporary cast or forged wheels. Either way, durable Harley-Davidson® custom wheels are a key component in developing your bike's personality.

STRENGTH AND STYLE

From a visual perspective, the wheels, sprocket and brake rotors make up almost half of the motorcycle's profile, and set the styling direction for the whole bike. Choose wisely. Harley-Davidson® forged, cast and laced wheels undergo thousands of hours of real-world testing to meet the highest standards of performance and durability.

SEEING THE DIFFERENCE

MIRROR CHROME
Looking for the ultimate flash? Choose Mirror Chrome wheels. To achieve this rich look, our dedicated team of polishers spends hours preparing the wheel for its finish. All visible wheel surfaces are micro-polished to a glass smooth finish, and special masking is applied to prevent contamination to threads and bearing bores.

CONTRAST CHROME
Can't make up your mind? Choose Contrast Chrome wheels. We start with a hand polished wheel, and add a proprietary finish that features both gloss black paint and chrome highlights. The combination produces a stunning contrast that lightens the wheel's profile by visually thinning the spokes, rim and hub.

BLACK ICE
Want the blacked-out look but unwilling to give up the shine? Choose Black Ice wheels. First, we polish all the surfaces. Then we apply the exclusive Black Ice coating for a finish with incredible depth and shimmer–impossible to achieve with ordinary "black chrome." These wheels look perfect on a blacked-out bike, but the wet-look holds its own in the company of chrome.

CUT BACK
Looking for a cool, hard-edged style? Choose Cut Back wheels. We start with a raw wheel, polish all the exposed surfaces, and coat the wheel in a durable easy-to-clean gloss black finish. But we don't stop there. We machine an intricate pattern into the wheel to the raw aluminum surface below. The resulting exposure of machined edges add a tough look to your ride's profile.

ORDERING PROCESS

Step 1: Select a wheel part number for your specific fitment.

Step 2: Select the wheel installation kit for your specific application (model, year, and front or rear). Note: If your model is not specified in the wheel fitment, a wheel installation kit will not make the wheel fit your model.

Step 3: Refer to the instruction sheet included in your wheel kit to determine the necessary parts required from the installation kit.

Step 4: Use only Harley-Davidson® specified tires. See a Harley-Davidson dealer. Using non-specified tires can adversely affect stability, handling or braking, which could result in death or serious injury.

WHEEL INSTALLATION KITS
Once you select your wheel style, select the Wheel Installation Kit designed specifically for your motorcycle. Kit includes the bearings and spacers required for installation.

COLOR SHOP & CUSTOM SEATS

2014
HARLEY-DAVIDSON®

The perfect way to show off your true colors. Nothing brings out your ride's personality like Color Shop custom paint and a matching custom stitched seat. And paint doesn't just reflect your attitude—it also sets the tone for the rest of your bike's accessories. It's the heart, and soul, of your custom of one.

Not all products are available in all countries – please consult your dealer for details.

HARLEY-DAVIDSON.

ARTISTRY IN STEEL AND LEATHER

Think of the bike as a blank canvas, a surface ready to express your personality with design, color and texture. A Harley-Davidson® Color Shop paint set and a complementing custom seat establish the tone for the rest of the accessories, and set your bike apart from the crowd.

COLOR SHOP CUSTOM PAINT

No surprises. Pick your style – flames, skulls or classic two-tone – and we deliver a custom stand-out look without the one-off custom worries. We handpick our artists and continually monitor their painting techniques and finish quality. Every unique set will have subtle differences associated with the artist's hand, but you will know from the start what the finished look will be.

COLOR SHOP CUSTOM SEATS

We believe customizing your seat shouldn't be a painful process. So we do away with the hassles. You can actually "test sit" a Brawler® or Sidekick® seat at a Harley-Davidson® dealer. You select from over 1,300 design options, and visually build your seat on the web to eliminate the design guesswork. And you don't need to send your seat across the country and hope you get it back before the riding season is over.

Not all products are available in all countries – please consult your dealer for details.

COLOR SHOP LIMITED CUSTOM PAINT

It's hard to believe this look is available directly from the factory. The Motor Company commissions only a handful of custom designs each year. Each hand-painted set has been lovingly created by a small team of artists and specialists, exercising their vast skills to deliver depth and dimension unknown in production paint.
And because Harley-Davidson hand-picks our custom painters, we can stand behind each Limited Series paint set with an unmatched 2-year Harley-Davidson® warranty when installed under the Custom Coverage Program.

Color Shop Limited Series paint gets you the stand-out custom looks you crave, without the guesswork and anxiety when having your bike painted by a local body shop.

COLOR SHOP LIMITED SERIES – SILVER-LINING
Find out what's behind the dark cloud. Airbrushed Hades Red Skulls float in the distance under a gleaming clear coat finish, and threaten anyone trying to see the light. For the ultimate contrast, a denim clear coat shades the Vivid Black base and embraces the Stardust Silver graphics that willingly make their way across the bike's profile. Limited availability – only 150 sets will be offered. See your dealer today. Sets ship November, 2013.

See pages 742-745 for available fitments.

COLOR SHOP CORE SERIES – HARD CANDY FLAKE

Metal flake, an iconic design element of the '70s, is back with a vengeance. Hard Candy Flake is created in a multi-step process that begins by laying several passes of silver microflake over a silver base, which is then topped with clear coat. The scallop pattern is hand-laid and masked, and color is applied in a candy coat that allows the flake to show through. The design is then clear coated, hand striped, and clear coated again to give it the final smooth, deep finish.

The Core Series Hardy Candy Flake paint sets are available in your choice of 12 sparkling two-tone combinations. Complete sets are available to fit many Sportster®, Dyna®, Softail® and Touring models, and "Tank Only" options are available to complement Original Equipment Vivid Black fenders on select Sportster, Dyna and Softail models.

See pages 742-745 for available fitments.

2014
HARLEY-DAVIDSON®

Keep your ride looking like new. Our cleaning and maintenance products are formulated specifically for H-D® motorcycles – unlike "auto parts store" brands, they work together without causing adverse reactions. They're the best protection against any damage the sun, moisture, bugs and road debris can inflict on your ride.

WASH
SUNWASH
CLOSS

MORE THAN AN OIL CHANGE

Harley-Davidson® dealers will service your motorcycle with factory-approved methods and equipment. Dealership technicians are specially trained and use advanced technologies to properly diagnose and maintain your bike. Whether it's your first 1,000-mile checkup, 20,000-mile service, or anything in between, your dealership should be your service destination.

THE WELL-EQUIPPED GARAGE

Adventure always comes at a price, especially for a motorcycle. The sun, moisture, bugs and road debris can take their toll on the bike's external and internal finishes. But, if you have the right tools for fighting through miles and miles of the highway's abuse, you'll be more than ready to ride for years.

FLUIDS
Whether it's oil, brake fluid or Screamin' Eagle® SYN3™ Synthetic Motorcycle Lubricant, all Harley-Davidson® fluids are developed exclusively for use in Harley-Davidson motorcycles, making them a must-have in your garage.

FILTERS
Don't overlook the essentials. Harley-Davidson air and oil filters keep debris out of your engine and help keep it healthy. So replace them routinely and insist on using only the genuine article.

STORAGE
Premium motorcycle covers, bike lifts and wall-mounted detachable storage units protect your bike and keep your garage organized.

LOCKS
Secure your Harley with street-proven cables, anchors and locks designed specifically to deter and prevent motorcycle theft. Go one step further and add a factory security system or universal alarm for even more peace of mind.

TOOLS
Every bit as rugged as our motorcycles, Harley-Davidson tools and tool kits boast a compact, lightweight design developed specifically for use on your Harley.

BATTERIES
Genuine H-D® Batteries feature AGM technology for higher cold cranking amps, longer life and improved rechargeability.

CLEANING TIPS FROM THE MOTOR COMPANY

We understand how important a clean ride is to you. That's why we've spent thousands of hours formulating cleaning and care products designed specifically for H-D surfaces and finishes. Unlike common "auto parts store" brands, these products are designed to protect your investment and will work together without adverse reactions.

CHECKLIST FOR COMMON CLEANING ISSUES:

- ☑ Before applying any protective or cosmetic product, you should always start off by washing your motorcycle with Sunwash® Bike Soap.
- ☑ Don't detail your bike in the direct light of the day. Sun-warmed clearcoat and hot surfaces may streak and swirl when drying.
- ☑ To soften melted-on boot marks and tar from exhaust pipes, apply Boot Mark Remover and let it set for a few minutes. Then scrape away the gunk with a Soft Cloth.
- ☑ The natural acid in bug splatter is damaging to surface finishes, so be sure to act quickly. Apply Bug Remover, wait a minute to soften the residue, and rinse away the debris.
- ☑ To remove adhesives, tar, tree sap and pollutants, dab on Glaze Poly Sealant, wait, then wipe it clean with a Soft Cloth.
- ☑ Is your leather looking dull? Black Leather Rejuvenator's pigmented formula restores the luster, and Leather Protectant weatherproofs the surfaces.
- ☑ Whitewalls a little dirty? Apply Harley® Wheel & Tire Cleaner with the Soft Detailing Pad to make them gleam.
- ☑ To revive dull seats, inner fairings and plastic surfaces, mist on Trim Cleaner and wipe away the dust and grime.
- ☑ To protect plastic, painted, and chrome-plated surfaces, apply Glaze Poly Sealant. This cream combats fading and oxidation, and its ultrafine leveling agent removes minor blemishes.
- ☑ Don't have time for a complete detailing session? Use Harley Gloss or Harley Spray Cleaner & Polish for quick jobs between applications of Glaze Poly Sealant.

C. TIE-DOWN BRACKETS – 93500006 SHOWN

B. CRUISER CRADLE WHEEL CHOCK

This sturdy aluminum wheel chock will hold your bike securely on the ground, on a trailer, or in the back of a pickup truck. Sized to fit most motorcycles, this wheel chock will keep your bike upright while you are storing, transporting or working on your bike. Designed for roll-on roll-off use, the rocking cradle allows one person to easily park their bike in the stand. Just roll the bike into place and dismount. The Cruiser Cradle holds the bike in place without straps. Upright storage saves garage space and permits easy access to both sides of the vehicle.

Cruiser Cradle's utility is not limited to the garage. The lightweight, folding wheel chock is easy to transport. Use it on the driveway when you are washing your bike, or, when equipped with the optional Trailer Adapter, the versatile wheel chock can be easily moved to a trailer or the back of a pickup truck. The one-person operation simplifies securing the bike for transport. Load the bike into the Cruiser Cradle, dismount, and the bike remains upright. Just two tie-down straps are required to hold the bike in place. And because you don't need to overtighten the straps, you won't damage sensitive suspension parts and handlebar bushings.

92900001
For use with models with vehicle weight up to 3000 lb (1360 kg) and front or rear wheel size of 14" to 22" (355–560mm) rim diameter and 3.15" to 8.66" (80mm–220mm) nominal wheel width.

C. COMPACT AIR COMPRESSOR WITH LIGHT

Correct tire pressure is crucial to safe operation and long tire life, but checking the pressure, finding a gas station with a working air pump, and filling the tire is a chore that many of us ignore. Compact Air Compressor is designed to simplify this necessary procedure. The compact, lightweight 12V pump is designed for life on the road. The all-in-one pump plugs into your bike's battery charging harness, and features a built-in 0-160 psi pressure gauge and bright LED work light. The 11" air hose and 6' fuse-protected power cord easily reach the front and rear wheels, and are stored in convenient compartments when not in use. The lightweight pump features durable, impact-resistant construction, and is small enough to fit easily in a saddlebag or strap-on luggage. Kit includes pump, valve stem extension, and nylon carrying bag.

12700020

D. VALVE STEM EXTENSION

Sometimes there's just not enough space around the tire's valve stem for the gas station air chuck and hose to reach. Brake rotors, sprockets and saddlebags get in the way and keep the air chuck from making an airtight seal. When that happens, this Valve Stem Extension provides easy access. Simply screw the extension in place on the stem, fill the tire to the proper pressure, remove the extension, and replace the valve stem cap. Then toss the extension in your saddlebag or tool roll for the next time.

42300009

E. COMPACT TIRE GAUGE AND TREAD DEPTH INDICATOR

Combination dial air pressure and tread depth gauge provides easy access to the valve stem. A durable internal diaphragm provides accurate air pressure readings with a dual range indicator for 0-60 psi and 0-400 kPa readings. The pressure relief valve is activated by a push button to eliminate inner gauge air pressure after use. The integrated tire tread depth gauge features a dual-range color-coded indicator, calibrated in 1/32" (0-14/32") and millimeters (0-11mm), for monitoring tread wear. A protective rubber boot covers the housing to protect the gauge from impact and abrasion.

F. DIGITAL TIRE PRESSURE GAUGE

Back-lit Digital Tire Pressure Gauge is easy to read at any time of day. Providing accurate pressure readings in 0.50 psi increments up to 60 psi. Scale can be changed to read psi, bar, Kg or kPa pressure with the touch of a button. This versatile gauge features a 12" braided line and 90 degree angle chuck for easy access to valve stems, and a tough rubber jacket to protect the gauge from damage. Batteries are included.

75158-10

G. TIRE GAUGE AND TREAD DEPTH INDICATOR WITH EMBOSSED LEATHER POUCH

Chrome-plated steel gauge housing with "Harley-Davidson" script and 90 degree air chuck. Dual range indicator for air pressure and tire tread depth readings. F. SCREAMIN' EAGLE® EXHAUST SAMPLING ADAPTER INSTALLATION TOOL
This tool is used to permit the connection of an air-to-fuel ratio "sniffer" to the exhaust header pipes for exhaust gas evaluation. Traditionally, the "sniffer" tool is inserted into the muffler to collect a sample for analyzing the engine's operating air-to-fuel ratio, but if the exhaust system is equipped with a catalyst, the sample collected at the tail pipe will not be accurate. This tool allows the exhaust gas sample to be taken ahead of the catalyst, resulting in accurate air-to-fuel ratio values.

14900008
For use during Dyno testing.

Also available:
SCREAMIN' EAGLE EXHAUST SAMPLING ADAPTER AND ADAPTER PLUG HARDWARE KIT
Kit includes 40 Rivnut® fasteners and 40 sealing plugs.

BODYGUARD IN A BOTTLE

Introducing a breakthrough in powertrain protection – Screamin' Eagle® SYN3® Full Synthetic Motorcycle Lubricant. For use in engines, transmissions and primary chaincases, it's just the latest in a line of products formulated specifically to keep your Harley® motorcycle running strong, mile after mile.

ENGINE OIL FAQ'S

HOW OFTEN SHOULD I CHANGE MY MOTORCYCLE ENGINE OIL?
You should change your motorcycle engine oil and engine oil filter at the first 1,000-mile service interval and at every 5,000-mile service interval thereafter. If you ride your motorcycle hard, under dusty conditions, or in cold weather, the engine oil and filter should be changed more often. You should always change your engine oil and filter prior to winter storage (or any extended storage) so that your engine oil is clean and free of contaminants during this time period.

CAN I GO LONGER BETWEEN OIL CHANGES BY CHANGING THE FILTER?
NO! The job of the oil filter is to remove dust, soot and other solid matter. Filters cannot remove water, gasoline or acids and cannot do the job of oil additives that have been used up. You should change your oil filter at the first 1,000-mile service interval and at every 5,000-mile service interval thereafter or prior to winter or extended storage periods.

WHAT VISCOSITY GRADE SHOULD I USE IN MY HARLEY MOTORCYCLE?
The recommended viscosity grade for all temperature conditions is SAE 20W50 Harley-Davidson® Motor Oil. SAE 10W40 H-D® Motorcycle Oil is also available and appropriate for low temperature climates. The SAE 50 H-D Motorcycle Oil is satisfactory in ambient temperatures of 60-80°F, and the SAE 60 H-D Motorcycle Oil in ambient temperatures above 80°F. SAE 20W50 covers the broadest range of operating temperatures.

SYN3® ENGINE, PRIMARY AND TRANSMISSION OIL FAQ'S

WHAT ARE THE KEY BENEFITS TO USING SYN3 MOTORCYCLE LUBRICANT?
- SYN3 Lubricant offers improved film strength for superior wear protection at high temperatures, and improved deposit control for a cleaner engine, transmission, and primary chaincase.
- SYN3 Lubricant can be used in the engine, primary chaincase, and transmission.
- SYN3 Lubricant is formulated for reduced oil consumption, improved wear protection, high-temperature stability, and superior overall field performance.

WHAT'S THE DIFFERENCE BETWEEN SYNTHETIC AND PETROLEUM-BASED LUBRICANTS?
Both synthetic and petroleum-based lubricants are derived from the same crude oils. But that's pretty much where the similarities end. Unlike their petroleum-based counterparts, which inherit physical components (including contaminants) of the source crude oil in the refining process, synthetic lubricants are manufactured from basestocks that are custom-designed from scratch to have desired properties for specific purposes, meaning that engineers have complete control of the lubricant from start to finish – at the molecular level.

WHAT DOES SYN3 FULL SYNTHETIC MOTORCYCLE LUBRICANT DO FOR MY DRIVETRAIN?
SYN3 Full Synthetic Motorcycle Lubricant offers all the benefits of Genuine Harley-Davidson 360 Motorcycle Oil, and:
- Offers superior wear protection at higher temperatures
- Keeps engines, transmissions and primary chaincases cleaner
- Meets the anti-wear lubricity requirements of all transmission gears
- Lubricates all primary chaincase components
- Delivers smooth, sure clutch operation
- Provides long-term protection of all internal components
- Improves seal and gasket performance
- Offers superior performance in high-output engines

WHEN CAN I START USING SYN3 FULL SYNTHETIC MOTORCYCLE LUBRICANT?
Right away. SYN3 Full Synthetic Motorcycle Lubricant is approved for all stages of engine life, including the first service interval – which means it's not detrimental to engine break-in. You can even use it as a first fill upon delivery of a new motorcycle.

SINCE SYN3 FULL SYNTHETIC MOTORCYCLE LUBRICANT IS A HIGH-PERFORMANCE LUBRICANT, CAN I WAIT LONGER BETWEEN CHANGES?
No. As with petroleum-based engine lubricants, you should drain and replace the synthetic motorcycle lubricant in your engine at every 5,000-mile service interval. You should also change your oil filter anytime the engine lubricant is changed. If you ride your motorcycle hard, under dusty conditions, or in cold weather, you should change your SYN3 Synthetic Motorcycle Lubricant and oil filter more often. You should always change your engine lubricant and filter prior to any extended storage so that your engine is clean and free of any contaminants during this time.

I. LOCTITE® INSULATING AND SEALING WRAP
Designed for the temporary repair of chafed wires or hose leaks, this innovative wrap contains no adhesive and leaves no residue. When stretched and wrapped around a surface, it bonds to itself, and protects the covered area. The tape also provides an extra layer of heat protection. The UV-resistant tape can be used as "no residue" masking tape. Wrap withstands temperatures of -65°F to 500°F, has a dielectric strength of 400 VPM, and is resistant to oils, water, saltwater and fuels.

11100007 1" x 10' Roll.

J. LOCTITE QUICKTITE® INSTANT ADHESIVE GEL
Loctite® QuickTite® Instant Adhesive Gel is a general-purpose instant adhesive for bonding metal, plastic, rubber, cork, cardboard, and leather. The precision-flow "squeeze grip" applicator allows pinpoint control of the exact amount and placement of the adhesive. The self-piercing, no-clog tip is spill-proof, and the locking cap prevents leaks and hardening.

11100044 0.14 oz Bottle.

K. LOCTITE FREEZE & RELEASE PENETRATING LUBE
Freeze & Release Penetrating Lube instantly chills seized and rusted bolts, nuts and studs down to -45ºF (-43ºC). The exceptional shock-freeze effect of this penetrating oil causes microscopic cracks in the layer of rust, allowing the lubricating ingredient to wick directly into the rust by capillary action. The rusted bolt assembly can be easily dismantled after allowing only 1-2 minutes penetration time. Aerosol nozzle and straw direct the spray for pinpoint application.

11100002 400 ml Aerosol Can.

L. LOCTITE 7649 CLEANER/PRIMER

94674-99 2 cc Packet.

N. LOCTITE 565 THREAD SEALANT
Formulated specifically for metal, tapered, pipe thread fittings, PST 565 cures rapidly to provide immediate low pressure sealing. Its controlled lubricity prevents galling, and it protects mated threaded areas from rust and corrosion. 565 can be used on fittings up to 2" (50mm) in diameter and has a temperature range of -65°F to 300°F (-54°C to 149°C). Disassembly possible with hand tools.

99818-97 6 ml Tube.

O. ANTI-SEIZE LUBRICANT
An improved formulation to meet revision E of MIL-A-907E. It is a heavy-duty, high temperature anti-seize thread compound. It resists galling, corrosion and reduces wear in heavy pressure applications. This lubricant is based on a synthetic grease formulation containing graphite, aluminum, and copper and is sensor safe. It will not evaporate or harden when exposed to extreme heat or cold. Meets 1600°F temperature requirements.

98960-97 1 oz Tube.

P. HYLOMAR® GASKET AND THREAD SEALANT
Recommended for holding gaskets in place during engine assembly.

SCREAMIN' EAGLE® ST PERFORMANCE SPARK PLUG

Screamin' Eagle® ST Spark Plugs feature double platinum coating for superior erosion resistance and extended life. The "V" trimmed ground electrode reduces shrouding of the flame front to promote flame propagation, and the fine wire center electrode enhances start ups and ignitability. Screamin' Eagle ST Plugs feature Ribbed Core Technology (RCT) that provides resistance to fouling, and are designed with Original Equipment-style noise suppression to prevent electrical interference with radios and CB communication equipment. Works great in racing applications where rich air/fuel conditions are required. Unique style with Screamin' Eagle logo. Sold in pairs.

Terminal construction ensures solid watertight connection with standard or performance spark plug wires.

Built-in suppressor/resistor reduces radio noise and interference.

Plated jacket helps prevent corrosion in harsh weather and temperature conditions.

RCT (Ribbed Core Technology) provides improved resistance to plug fouling. The rib's proximity promotes spark discharge to the shell on plugs that are starting to foul, allowing the air/fuel charge in the cylinder to ignite and clear the plug.

Fine Wire Center Electrode promotes ignitability and enhances start up.

"V-trimmed" ground electrode reduces shrouding to promote flame propagation.

Platinum pads on both electrodes reduce gap erosion for longer plug life.

A STRONG FOUNDATION

The D407/D408 tire is constructed for '09-later FL Touring, select Softail®, and specific Custom Vehicle Operations™ (CVO™) models, and is available exclusively through Harley-Davidson Dealers. The FL Touring rear tires feature Dunlop's advanced MT (Multi-Tread) technology.

- Tire features bold "Harley-Davidson" script on the sidewall.
- MT Multi-Tread rear tire incorporates a tough tread compound in the center that runs cooler to provide stability, excellent traction under braking and long life, and to each side is a section of lateral-grip compound that enhances traction at higher lean angles for great grip while cornering.
- Reinforced multi-layer tire carcass gives the tire strength for long life and provides stability at highway speeds and maximum lean angles.
- Bold, angled lateral grooves in the tread pattern evacuate water from the contact patch on wet roads.
- The D407/408 is available in blackwall, slim white and wide-white sidewall styles.

D402 TOURING

Built with a three-ply polyester casing with two fiberglass belts, the D402 offers greater load-carrying capacity and stability.

- Computer-optimized tread profile with offset center groove improves rider confidence over rain grooves and steel-grated bridges, while reducing cupping for even wear.
- The D402 is available in blackwall, slim whitewall, wide whitewall and engraved wide whitewall styles.

Blackwall **Wide Whitewall**

D401 CRUISER

An advanced tread pattern and specifically formulated compound deliver outstanding grip in wet or dry weather and provide long tire life.

- D401 tires use bias or bias-belted construction and incorporate a computer-optimized tread profile to reduce cupping for even wear.

CONTROL CABLE & BRAKE LINE TABLES

APPENDIX A
CONTROL CABLE APPLICATIONS **836–829**

APPENDIX B
BRAKE LINE APPLICATIONS **830–835**

HOW TO FIND A CUSTOM LENGTH CABLE OR LINE

If you select a custom handlebar that requires shorter or longer control cables and brake lines, it's easy to find the correct size using the following 5 simple steps. For example, if you are installing a handlebar that requires 4" longer cables on your 2009 Fat Boy® model, you would:

1. Find the model in the Original Equipment Applications chart
2. Note the Diamondback part number for your model
3. Locate that part number in the Custom Length chart
4. Note the length and specifications – this is the stock size
5. Move up or down the chart for shorter or longer length requirements

STILL NEED HELP?

Visit your local Harley-Davidson Dealer. They have the tools and expertise to select the correct cables and brake lines for your custom application. Your dealer can measure and test-fit cables and lines to determine the proper length and fittings to ensure smooth operation and interference-free routing.

CUSTOM BRAIDED CONTROL CABLES
Dress your bike for maximum custom impact. Harley-Davidson offers a choice of two braided cable finishes to match your customizing style. All cables include a clear anti-yellowing outer jacket, providing superior scuff protection and easy maintenance.

TO SELECT THE CORRECT CABLE KIT:
For Original Equipment applications (stock handlebars and risers): Locate the model and year of vehicle on pages 822-824. Applicable stock length part numbers are listed for each available finish.

For custom applications (custom handlebars and/or risers), available alternate length cables are listed in the corresponding platform tables on page 825. If you require assistance in determining the appropriate alternate length for your application, ask your Harley-Davidson® Dealer.

CUSTOM BRAIDED BRAKE LINE KITS
Dress your bike for maximum custom impact and performance. Harley-Davidson offers a choice of two braided brake line finishes, and two different design configurations, to match your customizing needs. All brake lines meet or exceed all DOT requirements.

INSTRUCTIONS FOR FINDING STOCK AND ALTERNATE LENGTH MODULAR BRAKE LINES:

1. Find your model and year on the chart below for the stock fitment.
2. For alternate length and banjo angle upper brake lines, see the chart on page XXX. Proper routing may require a different banjo angle from that used for stock fitment.

NOTE: Modular Brake Lines require both upper and lower brake line kits for installation. Subsequent changes due to handlebar modifications may only require a new upper line.

1-PIECE BRAKE LINE

MODULAR BRAKE LINE

"1-Piece" Brake Lines
Brake lines are specific to a stock length, and/or to a specific accessory handlebar application. "1-Piece" Brake Lines come in both single disc and dual disc configurations. "1-Piece" Brake Lines have pre-assembled/crimped banjo fittings for easy installation and to ensure the correct fit for the specific application.

Modular Brake Lines
Multi-piece design provides maximum versatility for both stock and alternate (plus) length applications. The common lower line is shared with specific models, while the variable length upper lines fit models depending on handlebar application. Upper brake lines are available in lengths up to +10" over the stock configuration and can be ordered with banjo angles to accommodate most handlebar configurations.
